ALIGNMENTS

The invention relates to an isolated cytokine receptor polypeptide designated Zcytori8. The Zcytori8 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhibit cell proliferation associated with porisists or tumour growth. The encoding nucleic acids are useful for providing Zcytori8 in vivo by gene therapy techniques. Zcytori8 oligonucleotide probes are useful for in vivo diagnosis, and the Zcytori8 probes and primers can be used to detect and localize Zcytori8 gene expression in tissue samples. The probes are also useful for detecting gross aberrations in chromosome 3 in which zcytori8 gene resides. The Zcytori8 polynucleotides can also be used in linkage-based testing of pulmonary alveolar proteinosis, familial growth, Cytokine receptor; Zcytor18; cell proliferation; antipsoriatic; human; pulmonary alveolar proteinosis; familial periodic fever; antitumour; erythroleukemia; chromosome 3p14.3; gene therapy. New cytokine receptor polypeptide designated zcytor18, useful for inhibiting cell proliferation associated with psoriasis or tumor growt and modulating immune system by binding to endogenous zcytor18 ligand. Human cytokine receptor, Zcytor18 amino acid sequence. ABB07626 standard; protein; 753 AA 2; Gao Claim 1; Page 2; 119pp; English. 26-JUL-2000; 2000US-0220747P. 23-JUL-2001; 2001WO-US023253. The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhibit cell proliferation associated with psoriasis or tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 oligonucleotide probes are useful for invivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are also useful for detecting gross aberrations in chromosome 3 in which Zcytor18 gene resides. The Zcytor18 polynucleotides can also be used in linkage-based testing of pulmonary alveolar proteinosis, familial periodic fever and erythroleukemia, and erythroleukemia associated with polymorphisms of cytokine receptors. The present sequence represents a human Zcytor18 variant amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PRNLNISQHGSDMQVSFDHAPHNFGFRFFYLHYKLKHEGPFKRKTCKQEQTTEMTSCLLQ 275

```
The invention relates to an isolated cytokine receptor polypeptide designated Zcytor18. The Zcytor18 polypeptides can be expressed by standard recombinant methodology. The polypeptides can be used to inhibit cell proliferation associated with psoriation tumour growth. The encoding nucleic acids are useful for providing Zcytor18 in vivo by gene therapy techniques. Zcytor18 oligonucleotide probes are useful for in vivo diagnosis, and the Zcytor18 probes and primers can be used to detect and localize Zcytor18 gene expression in tissue samples. The probes are
                                                                                                                    515

also useful for detecting gross aberrations in chromosome 3 in which Zcytor18 gene resides. The Zcytor18 polynucleotides can also be used linkage-based testing of pulmonary alveolar proteinosis, familial periodic fever and erythroleukemia, and erythroleukemia associated wipolymorphisms of cytokine receptors. The present sequence represents human Zcytor18 splice variant

The invention describes novel nucleic acids encoding interleukin (IL) 17
receptor like polypeptides useful as vaccines and in gene therapy. These
receptor like polypeptides useful as vaccines and in gene therapy. These
contembration anti-convulsant, anti-alzabetic, anti-alzabeimer's, renal,
immunosuppressive, hepatic, anabolic, anorectic, anti-alzabeimer's, renal,
costeopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and
coptumental section anti-convulsant, anti-leukaemic, anti-infertility and
coptutal mological activities. The IL-17 receptor like nucleic acids and
coptutal mological activities. The IL-17 receptor like polypeptide (IL177th) expression. These
conclude, for example immune disorders (e.g. inflammation diabetes and
cransplant rejection), infections (e.g. hepatitis and septicaemia),
weight disorders (e.g. anorexia, cachexia and obesity),
conclude disorders (e.g. anorexia, sathma and emphysemal, skin disease
concers, cachesis, sathma and emphysemal, skin disease
concers, cachesis, and hypercalcaemia, wascular disorders
(e.g. erroke and atherosclerosis, and hypercalcaemia), vascular disorders
(e.g. erroke and atherosclerosis, and retinal neuropathy). The
complements may also used as diagnostic probes to detect and
concers needing restorative therapy. The IL17Th may also be used as
cantigens in the production of antibodies against the proteins and in
cassays to identify modulators of expression and activity. The anti-
concers and antagonists may also be used to down assays to identify modulators of a suppression and activity. The anti-
concers and antagonists may also be used as one set of down and an antagonists may also be used as diagnostic probes to detect and
concers and enterprocative therapy. The IL17Th may also be used as
cantigens in the production of antibodies against the proteins and in
assays to identify modulators of expression and activity. The anti-
concers and antagonists may also be used as enterpression and enterpression and articity and antagonists may also be used as
               hepatic; anabolic; ancrectic; anti-alzheimer's; anti-parkinsonian; anti-convulsant; anti-asthmatic; dermatological; renal; osteopathic; ascular; cytostatic; anti-leukamenc; anti-infertility; ophthalmological; hepatitis; anorexia; cachexia; neuronal dysfunction; lung disease; bone disease; vascular disorder; eye disorder; cancer; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes, psoriasis and glaucoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ILI7rlp antibodies and antagonists may also be used to down regulate expression and activity. This is the amino acid sequence of the human Interleukin 17 (IL-17) receptor like protein described in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2 DICGWRMKAAARPRLCVANEGVGPASRNSGLYNITFKYDNCTTYLNPVGKHVIADAQNIT

The invention describes novel nucleic acids encoding interleukin (IL) 17
receptor like polypeptides useful as vaccines and in gene therapy. These
receptor like polypeptides useful as vaccines and in gene therapy. These
convenient inflammatory, anti-diabetic, anti-microbial,
immunosuppressive, hepatic, anabolic, ancrectic, anti-alzheimer's, renal,
anti-parkinsonian, anti-convulsant, anti-alsthematic), dermatcological,
costeopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and
optical activities. The IL-17 receptor like nucleic acids and
coptens may be used to prevent and treat diseases associated with
inappropriate IL-17 receptor like polypeptide (IL17Tp) expression. These
coptens may be used to prevent and disorders (e.g. inflammation, diabetes and
transplant rejection), infections (e.g. papatitis and septicaemia),
weight disorders (e.g. anorexia, cachexia and obesity), neuronal
cransplant rejection), infections (e.g. parkinson's disease and epilepsy),
lung disorders (e.g. cystic fibrosis, serkima and emphysema), skin disease
coptenders (e.g. oxteoporosis, asthema and emphysema),
clung disorders (e.g. oxteoporosis and hypercalcaemia), vascular disorders
(e.g. stroke and atherosclerosis, cancers (e.g. infertility and
chreast cancer), reproductive disorders (e.g. infertility and
chreast cancer), reproductive disorders (e.g. infertility and
chreat cancer), reproductive disorders (e.g. infertility and
chreat cancer), reproductive disorders (e.g. infertility and
cynamitate the presence of similar nucleic acids in samples and identify
patients needing restorative therapy. The IL17Ip may also be used as
considered to dentify modulators of expression and activity. The anti-
coptication but is based on the human interleuking to copy or expression and activity. Note: This sequence is not given in the
capeatic processing the producer (AMU09904) and has been created according to
copy information given in claim 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1;

```
The invention describes novel nucleic acids encoding interleukin (IL) 17
receptor like polypeptides useful as vaccines and in gene therapy. These
receptor like polypeptides useful as vaccines and in gene therapy. These
contemporate inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, anti-inflammatory, dermatological,
anti-parkinsonian, anti-convulsant, anti-asthmatic, dermatological,
costeopathic, vascular, cytostatic, anti-luekaemic, anti-infertility and
cophthalmological activities. The IL-17 receptor like nucleic acids and
cophthalmological activities. The IL-17 receptor like nucleic acids and
cophthalmological activities. The LI-17 receptor like nucleic acids and
cophthalmological activities. The LI-17 receptor like nucleic acids and
cophthalmological activities. The LI-17 receptor like nucleic acids and
cophthalmological activities and elso described include, for example immune disorders (e.g. hepatitis and septicaemia),
weight disorders (e.g. anorexia, cachexia and obesity), neuronal
dysfunction (e.g. albeimer's disease, parkinson's disease and epilepsy),
cophen disorders (e.g. osteoporosis, asthma and emphysema), skin disease
(e.g. erzema and psoriasis), kidney disease (e.g. glomerulonephritis),
cophen diseases (e.g. osteoporosis and hypercalecemia, myeloma and
copheranticate the presence of similar nucleic acids in samples and identify
copatients needing restorative therapy. The ILI7Th may also be used as
contitates needing restorative therapy. The ILI7Th may also be used as
cancers of similar nucleic acids in samples and in
assays to identify modulators of expression and activity. The anti-
cophthalmologies and antagonists may also be used to down regulate
expression and activity. Note: This sequence is not given in the
capture species on the human Interleukin 17 (IL-17) receptor
cophthalmologies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        241

The invention describes novel nucleic acids encoding interleukin (IL) 17 receptor like polypeptides useful as vaccines and in gene therapy. These have immunomodulacory, anti-inflammatory, anti-diabetic, anti-microbial, immunosuppressive, hepatic, anabolic, anorectic, anti-alzheimer's, renal, anti-parkinsonian, anti-convulsant, anti-asthmatic, dermatological, osteopathic, vascular, cytostatic, anti-laukaemic, anti-infertility and ophthalmological activities. The IL-17 receptor like nucleic acids and proteins may be used to prevent and treat diseases associated with inappropriate IL-17 receptor like polypeptide (IL17tlp) expression. These include, for example immune disorders (e.g. inflammation, diabetes and transplant rejection), infections (e.g. hepaticis and septicaemia), weight disorders (e.g. anorexia, cachexia and obesity), neuronal
                                                                                                                                                                                                                                                                                                                                                                                                                             Interleukin 17; hIL-17 receptor like protein; immunomodulatory; anti-inflammatory; anti-diabetic; immunosuppressive; anti-microbial; hepatic; anabolic; anorectic; anti-alzheimer's; anti-parkinsonian; anti-convulsant; anti-asthmatic; dermatological; renal; osteopathic; vascular; cytostatic; anti-leukaemic; anti-infertility; ophthalmological; hepatitis; anorexia; cachexia; neuronal dysfunction; lung disease; bone disease; vascular disorder; eye disorder; cancer; human; mutant;

dysfunction (e.g. Alzheimer's disease, Parkinson's disease and epilepsy),

lung disorders (e.g. cystic fibrosis, asthma and emphysema), skin disease

(e.g. eczema and psociasis), kidney disease (e.g. glomerulonephritis),

bone diseases (e.g. osteoporosis and hypercalcaemia), wascular disorders

(e.g. stroke and atherosclerosis, cancers (e.g. leukemia, myeloma and

breast cancer), reproductive disorders (e.g. infertility and

miscarriage), eye disporders (e.g. glaucoma and retinal neuropathy). The

DNA and its complements may also used as diagnostic probes to detect and

cup antitate the presence of similar nucleic acids in samples and identify

patients needing restorative therapy. The ILI77Lp may also be used as

antigens in the production of antibodies against the proteins and in

cassays to identify modulators of expression and activity. The anti-

CILI71Lp antibodies and antagonists may also be used to down regulate

expression and activity. Note: This sequence is not given in the

specification but is based on the human Interleukin 17 (IL-17) receptor

cinformation given in claim 18

The invention describes mover macracia across and in gene therapy. These have immunosuppressive, hepatic, anti-inflammatory, anti-diabetic, anti-microbial, immunosuppressive, hepatic, anti-inflammatory, anti-diabetic, anti-microbial, immunosuppressive, hepatic, andi-asthmatic, dermatological, cstrivties. The IL-IT receptor like mucleic acids and proteins may be used to prevent and treat diseases associated with imappropriate IL-IT receptor like mucleic acids and proteins may be used to prevent and treat diseases associated with inflammation, diabetes and transplant rejection) infections (e.g. hepatitis and septicaemia), weight disorders (e.g. anorexia, cachexia and obesity), neuronal (e.g. Alzheimer's disease, Parkinson's disease and epilepsy), lung disorders (e.g. cystic fibrosis, asthma and emphysema), skin disease (e.g. eczema and psoriasis), kidney disease (e.g. glomerulonephritis), bone diseases (e.g. cystic fibrosis, asthma and emphysema), skin disease (e.g. excemportosis, asthma and emphysema), skin disease (e.g. stroke and atheroscierosis, asthma and emphysema), skin disease (e.g. stroke and atheroscierosis, cancers (e.g. infertility and breath and its complements may also used as diagnostic probes to detect and breath its complements may also used as infertility and its complements may also used as diagnostic probes to identify modulators of similar nucleic acids in samples and in assays to identify modulators of expression and activity. The anti-complement in the production of antibodies against the proteins and in assays to identify modulators of expression and activity. The anti-complement is based on the human incerlenkin if (IL-IT) receptor in the protein sequence (Allan and according to complements may also be used to down regulate expression and activity. Note: This sequence is not given in the protein sequence (Allan and according to complements may also be used to down regulate expression and activity. Note: This sequence is not given in the protein sequence (Allan and according to complements
Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes, psoriasis and glaucoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61

The invention describes novel nucleic acids encoding interleukin (IL) 17
receptor like polypeptides useful as vaccines and in gene therapy. These
have immunoadulatory, anti-inflammatory, anti-diabetic, anti-microbial,
immunosuppressive, hepatic, anabolic, anci-diabetic, anti-infertility and
conti-parkinsonian, anti-convulsant, anti-asthmatic, dermatological,
osteopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and
ophthalmological activities. The IL-17 receptor like nucleic acids and
copteins may be used to prevent and treat diseases associated with
inappropriate IL-17 receptor like polypeptide (IL17rb) expression. These
copteins may be used to prevent and treat diseases associated with
infections (e.g. inflammation, diabetes and
transplant rejection), infections (e.g. hepatitis and septicaemia),
weight disorders (e.g. anorexia, cachexia and obesity), neuronal
dysfunction (e.g. Alzheimer's disease, parkinson's disease and epilepsy),
copied diseases (e.g. osteoporosis, aethma and emphysema), skin disease
(e.g. eczema and psoriasis), kidney disease (e.g. glomerulonephritis),
copied diseases (e.g. osteoporosis and hypercalcaemia), wascular disorders
(e.g. stroke and atherosclerosis, cancers (e.g. leukemia, myeloma and
breast cancer), reproductive disorders (e.g. leukemia, myeloma and
copied as atroke and atherosclerosis, cancers (e.g. leukemia, myeloma
copied and the presence of similar nucleic acids in samples and identify
copied antigens in the production of antibodies against the proteins and in
copied antigens in the production of antibodies against the proteins and in
copied antigens in the arminors of expression and activity. The anticopied and artegorist we have a not civery of own regulate
copied antigens in the arminors of expression and activity. The anticopied antigens in the production of antibodies against the proteins and in the
copied antigens in the arminors of expression and activity. The propession and artegorial production of antibodies against the arminors of expression and a

Nucleic acids encoding interleukin 17 receptor like polypeptides, useful for preventing, diagnosing and treating, e.g. leukemia, asthma, diabetes,

Claim 24; Page; 158pp; English.

for preventing, diagnos. psoriasis and glaucoma.

```
The invention describes novel nucleic acids encoding interleukin (IL) 17

receptor like polypeptides useful as vaccines and in gene therapy. These
have immunomodulatory, anti-inflammatory, anti-diabetic, anti-microbial,
immunosuppressive, hepatic, anti-alsthmatic, dermatological,
osteopathic, vascular, cytostatic, anti-leukaemic, anti-infertility and
ophthalmological activities. The IL-17 receptor like nucleic acids and
proteins may be used to prevent and treat diseases associated with
inappropriate IL-17 receptor like polypeptide (ILI7rlp) expression. These
include, for example immune disorders (e.g. inflammation, diabetes and
transplant rejection), infections (e.g. hepatitis and septicaemia),
weight disorders (e.g. anorexia, cacheraia and obesity), neuronal
dysfunction (e.g. Alzheimer's disease, Parkinson's disease and epilepsy),
lung disorders (e.g. cystic fibrosis, asthma and emphysema), skin disease
(e.g. eczema and psoriasis), kidney disease (e.g. glomerulonephritis),
bone diseases (e.g. osteoporosis and hypercalcaemia), vascular disorders
con receptor in reproductive disorders (e.g. infertility and
con disease cancer), reproductive disorders (e.g. infertility and
con disease (e.g. osteoporosis and hypercalcaemia), myeloma and
con disease cancer), reproductive disorders (e.g. infertility and
con disease (e.g. osteoporosis and hypercalcaemia), myeloma and
con disease (e.g. osteoporosis (e.g. infertility and
con disease (e.g. osteoporosis (e.g. infertility) and
con disease (e.g. infertility) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  miscarriage), eye disorders (e.g. glaucome and retinal neuropathy). The DNA and its complements may also used as diagnostic probes to detect and quantitate the presence of similar nucleic acids in samples and identify patients needing restorative therapy. The LL17rlp may also be used as antigens in the production of antibodies against the proteins and in assays to identify modulators of expression and activity. The anti-ll17rlp antibodies and antagonists may also be used to down regulate expression and activity. Note: This sequence is not given in the specification but is based on the human Interleukin 17 (IL-17) receptor like protein sequence (AAU09904) and has been created according to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         82

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel from 1970 fully defined nucleotide sequences which encode novel to polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotides and encoded for detecting the polynucleotides and encoded for detecting as primer for synthesising the polynucleotide or as a probe for detecting the polynucleotide and encoded genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               500
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   630
regeneration. Membrane proteins, signal transduction-related proteins, transcription-related proteins, disease-related proteins and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              81 ALGIEFLKGFRVILEELKSEGRQCQQLILKDPKQLNSSFKRTGMESQPFLNMKFETDYFV 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        200

The sequence is PRO20026 which is the human Interleukin 17 receptor, IL-
17RH4, encoded by DNA 154095-2998. A composition containing ant/agonists
to the PRO polypeptides or individual components are useful for treating
a mammal with an immune related disease, e.g. systemic lupus
erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic
arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic
inflammatory myopathy, Sjogram's syndrome, systemic vasculitis,
sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia,
thyroiditis, diabetes mellitus, immune-mediated skin disease,
contact dermatitis, an allergic disease e.g. food hypersensitivity,
asthma, a transplantation associated disease, or a chronic inflammatory
demyelinating polymeuropathy. Treating a degenerative cartilaginous
disorder comprises administering a PRO1031 or PRO1122 polypeptide
agonist, or antagonist to the mammal. Numerous examples of the diseases
and disorders are given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NYKHKGGGRGSCKGELFLVAVSAIAEKURQAKQSSSAALSKFIAVYFDYSCEGDVPGILD 472

The invention relates to a nucleic acid having similarity to interleukin-

CC (17.17) or IL-17 receptor comprises at least 80% nucleic acid sequence
identity to a nucleotide sequence which: (a) encodes a polypeptide having
a sequence of appearing as ABUBS697-ABUB9700 and ABUB99702-ABUB99705 (F1-

BB), lacking or having its associated signal peptide; (b) encodes an

EXTRACELIULAR domain of F1-P8 lacking its associated signal peptide; (c)

CONSISTS of a sequence of appearing as ACAB9850-ACAB89853 and ACA89855-

CC ACAB9858687; or (d) consists of the full-length coding sequence of

SC ACAB9858687; or (d) consists of the full-length coding sequence of

CC ACAB9858687; or (d) consists of the full-length coding sequence of

SC ACAB9858687; or (d) consists of the full-length coding sequence of

CC CONSISTS or (d) consists of the full-length coding sequence of

SC ACAB9858687; or (d) consists of the full-length coding sequence of

CC CONSISTS or (d) consists of the full-length coding sequence of

SC ACAB9858687; or (d) consists of the full-length coding sequence of

and gene New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO1031, PRO1122, PRO10272, useful in molecular biology, chromosome and gene mapping, in generating antisense RNA and DNA, and in gene therapy.

Claim 10; Fig 18; 148pp; English.

The invention relates to an isolated nucleic acid comprising at least 80% sequence identity to 8 cDNA sequences encoding PRO polypeptides (or their extracellular domains) which are members of the interleukin-17 (IL-17) family of cytokines. Also included are expression vectors, host cells, the propertides fused to a heterologous amino acid sequence, an anti-PRO antibody, a composition comprising the above polypeptide (or its agonist or antagonist, or the antibody cited above) in combination with a carrier, determining the presence of a PRO polypeptide (or its agonist or antagonist, or the antibody cited above) in combination with a carrier, determining the presence of a PRO polypeptide in a sample, identifying a compound that minics or inhibitis the expression of compound that minics a carrier, identifying a compound that minics in the expression of gene encoding the above polypeptides, etimulating or inhibiting the expression of gene encoding the above polypeptides, etimulating or inhibiting or inhibiting or inflammatory calls into a tissue of a mammal and inhibiting or stimulating angiogenesis induced by a PRO1031 polypeptide or its agonist or in a mammal. The nucleic acid is useful in molecular biology, e.g. use as the proparing PRO polypeptides by recombinant techniques, and in generating either transgenic animals or knock-out animals which, in turn, are useful in the development and screening of therapeutically useful cagnetic ament for treating a condition responsive to the polypeptide or antibody, and in various diagnostic assays. For immune-related disorders, these may be systemic lupus erythematosus, rhemmatosid arthritis, and in various diagnostic assays. For immune-related disorders, these may be systemic lupus erythematosus, rhemmatosid arthritis, and and any despression of a medicament for treating a condition responsive to the polypeptide or the antibody, and such arthritis and any despression of a medicament for treating a condition responsive to the polypeptide or the antibody and arthritis and a ostecarthritis, juvenile chronic arthritis, spondyloarthropathy, systemic sclerosis, idiopathic inflammatory myopathy, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,

Human; interleukin-17; IL-17; cytokine; T-lymphocyte; inflammatory cell; angiogenesis; gene therapy; immune-related disorder; systemic lupus erythematosus; rheumatoid arthritis; osteoarthritis; systemic sclerosis; idiopathic inflammatory myopathy; Sjogren's syndrome; sarcoidosis; autoimmune haemolytic anaemia; thyroiditis; psoriasis; diabetes mellitus; demyelinating disease; Guillain-Barre syndrome; autoimmune chronic active hepatitis; primary billary cirrhosis; inflammatory bowel disease; immune-mediated skin disease; contact dermatitis; allergic disease; asthma; urticaria; contact dermatitis; allergic disease; asthma; urticaria;

Human IL-17 family member, PRO20026.

```
infectious or autoimmuse drands active hepatitis, primary biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-ensitive enteropathy, Whipple's disease, autoimmune or immune-mediated skin disease, bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, allergic disease, asthma, allergic rhintis, atopic dermatitis, food hypersensitivity, urticaria, immunologic disease of the lung, eosinophilic pneumonias, indiopathic pulmonary fibrosis, hypersensitivity pneumonitis, transplantation associated disease, graft rejection or graft-versus-host disease. The composition is useful in treating the above-mentioned immune-related diseases in a mammal, or in increasing or inhibiting the proliferation of Inflammatory cells into a tissue of a mammal. The present sequence represents a PRO polypeptide of the invention
polyneuropathy, hepatobiliary disease.
        inflammatory demyelinating

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 10,
